SALT ELECTRIC ATTENDS PRESIDENT'S STIMULUS BILL SIGNING AT DENVER MUSEUM OF NATURE & SCIENCE

DENVER, CO – SALT Electric, a Denver-based full service electrical contractor specializing in sustainable energy, attended the economic stimulus bill signing by President Obama today at the Denver Museum of Nature & Science. SALT Electric helped install the solar array on the roof of the museum last year.

Owner Matthew Caryofilles was among the few who received an invitation to attend the signing.

“Witnessing President Obama sign the stimulus bill at the location of one of our proudest installs was an experience of a lifetime and one I will never forget,” says Caryofilles.

“This bill is important to us because it will hopefully help create new green jobs and help determine the way we obtain and use energy. Because of work like the museum project, we have been able to create half a dozen new jobs, and we are hoping this bill will help us create more.”

SALT Electric has helped install solar arrays in other high profile Denver-area locations, including the Governor’s Mansion, Pepsi Center and Colorado Convention Center.

About SALT Electric

Established in 2003, SALT Electric is a Denver-based full service electrical contractor that specializes in sustainable energy. With two Master Electricians on staff, SALT Electric emphasizes quality of work, reliability and customer care. From solar installation to electrical automation, SALT Electric believes in providing power for the next generation.
